

# HIP & JOINT SUPPORT FOR ANIMALS

## FREQUENTLY ASKED QUESTIONS

### What makes this product different than others?

- It's **liquid**. Eniva's all-liquid product is formulated with Eniva's proprietary **Cell-Ready**® technology that allows for fast delivery and absorption.
- **High potency** formula for impactful results.
- **High quality ingredients** with **safety testing** for contaminants.
- Contains **Type II Collagen**.
- The Eniva Hip & Joint specialized liquid formula **does NOT** contain binders, fillers, or artificial colors or flavorings like many of the animal joint products on the market.

### What are the benefits?

- **Joint Mobility**
- **Cartilage Health**
- **Joint Comfort**
- **Bone & Tendon Strength**
- **Antioxidant Protection**

### What's in Eniva Hip & Joint Support?

- **Glucosamine HCl/Sulfate** - Important building block for cartilage and joint repair.
- **Chondroitin** - Support for synovial fluid and lubrication.
- **MSM** - (Methyl-sulfonyl-methane) Contributes sulfur for protein synthesis and enzyme function for tendons and cartilage. It has powerful anti-inflammatory properties.
- **Type II Collagen** - Formulation of cartilage and anti-inflammatory support.
- **L-Proline** - Synthesis of collagen (protein) for formulation of connective tissue.
- **Vitamin C** - Powerful antioxidant. Important ingredient in the synthesis of collagen and cartilage.
- **Manganese** - Necessary ingredient in the formulation of cartilage.
- **Boron, Calcium, & Magnesium** - Healthy bone formulation and joint flexibility.

### How is it given?

The bottle has a self-measuring cap that helps you measure the exact amount to give to your pet, just squeeze the bottle to fill the cup - it's that easy! You can simply measure how much you need and add it to your pet's food or water.

### How much does it cost?

The pricing generally covers between a 32 to 96 day supply for your pet, depending upon its size. It comes in a 32 ounce bottle and the price per bottle is:

### What are the benefits of Type II Collagen?

Type II Collagen contains the greatest number of anti-inflammatory and joint-supporting building blocks for cartilage formation. It also contains a powerful, newly discovered proteoglycan (cartilage building block) called cartilage matrix glycoprotein (CMGP) that helps reduce oxidative damage to the joint. In addition to these new discoveries, there are other ingredients in Type II Collagen that make it more effective than just taking glucosamine or chondroitin by themselves. It has an absorption rate of 70-90%.

### Will Eniva Hip & Joint Support react or interfere with other prescription medications?

The ingredients found in Eniva's Hip & Joint Support are naturally occurring and considered safe. There are no known toxic side effects or known drug interactions. Because the ingredients in Hip & Joint Support are normally occurring in animals and humans, they pose little danger of the side effects found from the use of non-steroidal anti-inflammatory drugs (NSAIDS).

### My pet does not exhibit signs of joint disease. Is there a need for Eniva's Hip & Joint Support?

Veterinarians recommend that a glucosamine, chondroitin, MSM-type supplement be administered to animals when they reach the age of three to four years. This serves to proactively support healthy joint tissue and delay the onset of degeneration of joint tissue. This is particularly true of sporting dogs that undergo daily, rigorous movement on hard surfaces.
